**Curriculum Structure** 

M.C.A.

(Revised 2024 Pattern)

# **School of Computer Applications**

Effective from Academic Year 2024-25

#### **Program Curriculum**

#### Preamble:

At Pimpri Chinchwad University, we present the Master of Computer Application (MCA), a Post Graduate Program designed to equip students with a comprehensive understanding of Computer Science and Application. As aspiring professionals in the field of computing, we acknowledge the weight of responsibility that accompanies our education. Upholding the highest standards of integrity, professionalism, and ethical conduct is fundamental to our academic pursuits and beyond. We embrace the imperative of continuous learning and adaptability in an era marked by rapid technological advancement, pledging to proactively seek new knowledge and master emerging technologies.

The MCA program curriculum is designed to provide students with a strong foundation in computer science, programming languages, software engineering, database management systems, and computer networks. The program also includes courses on business management and soft skills to prepare students for a career in the IT industry

Overall, an MCA program aims to provide students with a well-rounded education that prepares them for a successful career in the IT industry and for further academic pursuits.

#### Vision and Mission of Program:

#### Vision:

To create computer application specialists who will benefit society, industry, and all stakeholders

#### Mission:

To provide people in the computer application sector with valuable academic, research, and employment prospects as well as social consciousness with ethical principles.

#### **Program Outcomes:**

Here are some possible Program Outcomes (POs) for a Master of Computer Application (MCA) program:

- 1. Computational Knowledge: Understand and apply mathematical foundation, computing, and domain knowledge for the conceptualization of computing models from defined problems.
- 2. Problem Analysis: Ability to identify, critically analyze, and formulate complex computing problems using fundamentals of computer science and application domains.
- Design and Development of Solutions: Ability to transform complex business scenarios and contemporary issues into problems, investigate, understand, and propose integrated solutions using emerging technologies.
- 4. Conduct Investigations of Complex Computing Problems: Ability to devise and conduct experiments, interpret data, and provide well-informed conclusions.
- 5. Modern Tool Usage: Ability to select modern computing tools, skills, and techniques necessary for innovative software solutions
- 6. Professional Ethics: Ability to apply and commit professional ethics and cyber regulations in a global economic environment.
- 7. Life-long Learning: Recognize the need for and develop the ability to engage in continuous learning as a Computing professional.
- 8. Project Management: Ability to understand management and computing principles with computing knowledge to manage projects in multidisciplinary environments.
- 9. Communication Efficacy: Communicate effectively with the computing community as well as society by being able to comprehend effective documentation and presentations.
- 10. Societal & Environmental Concern: Ability to recognize economic, environmental, social, health, legal, and ethical issues involved in the use of computer technology and other consequential responsibilities relevant to professional practice.
- 11. Individual & Team Work: Ability to work as a member or leader in diverse teams in a multidisciplinary environment.
- 12. Innovation and Entrepreneurship: Identify opportunities, entrepreneurship vision, and use of innovative ideas to create value and wealth for the betterment of the individual and society.

#### **Program Educational Objectives:**

Here are some possible Program Educational Objectives (PEOs) for a Master of Computer Applications (MCA) program:

To prepare the youth to take up positions as system analysts, system engineers, software engineers, and Programmers.

- 1. To aim at developing systems thinking, abstract thinking, skills to analyze and synthesize, and skills to apply knowledge through extensive problem-solving sessions, hands-on practice under various hardware and software environments, and projects developed.
- 2. To prepare students with social interaction skills, communication skills, life skills, entrepreneurial skills, and research skills, which are necessary for career growth and for leading a quality life.

#### **Program Specific Outcomes:**

PSO1-- Comprehend and implement mathematical and industrial principles in computing methodologies to address real-time industrial issues.

PSO2:-Utilizing the most recent computer tools and technologies, analyze, design, develop, test, and maintain software applications.

PSO3: the capacity to employ computer technology and mathematical and computer science skills to solve business difficulties

#### **INDEX**

| Sr. No. | Content  | Pg. No. |

| Details   | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| <b>Introduction To Python:</b> Script Model Programming, Understanding Python variables, basic Operators, Declaring and using Numeric data types: int, float, complex, using string data type and string operations, Defining list and list slicing, List manipulation using in build methods, Use of Tuple data type, Dictionary manipulation. | CLO 1 | 9     |
| UNIT II   |       |       |

| Python Program Flow Control, Functions And Packages: Conditional blocks using if, else and elif, Simple for loops in python, For loop using ranges, string, list and dictionaries, Use of while loops in python, Loop manipulation using pass, continue, break and else. Programming using Python conditional and loops block. Programming using string, list and dictionary in build functions. Organizing python codes using functions, Understanding Packages, Powerful Lambda function in Python Programming using functions, modules and external packages. | CLO 2 | 9 |
|--|-------|---|
| UNIT III   |       |   |
| <b>Strings And Regular Expressions:</b> Strings: Formatting, Comparison, Slicing, Splitting, Stripping, Negative indices, String functions. Regular expression: Matching the patterns, Search and replace.   | CLO3  | 9 |
| UNIT IV  |       |   |
| <b>NumPy And Matplotlib:</b> What is NumPy? How to install NumPy, Arrays, Array indexing, Array Vs Listing Data types, Array math, Broadcasting. Matplotlib -Plotting, subplots and images   | CLO4  | 9 |
| UNIT V   |       |   |
| <b>File Handling With Python:</b> Reading config files in Python, Writing log files in Python, Understanding read functions, read(), and readlines(). Understanding write functions, write(), and write lines (). Manipulating file pointer using seek. Programming using file operations  | CLO5  | 9 |

#### Learning resources

#### Textbooks:

| Course L              | earning Outc            | comes (CLO             | )):              | Students will be able to:  1. Identify the concepts like array, matrix, traversing, and indexing using sorting and searching techniques.  2. Explain the appropriate data structures like stack, queue as applied to the specified problem definition.  3. Apply the concepts of Linked Lists and it's applications on given data  4. Implement the knowledge of handle operations like searching, insertion, deletion, and traversing mechanisms on various data structures  5. Evaluate the non-linear data structures through Tree. |  |                                     |                       |  |  |

# Course Contents and Syllabus:

#### Practical plan

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| <b>Introduction to Data Structures:-Introduction:</b> Concept and Need of Data Structure, Definition Abstract Data Type, Types of Data Structures: (i) Linear Data Structures (ii) Non-Linear Data Structures, Operations on Data Structures: (i) Traversing (ii) Insertion (iii) Deletion   | CLO 1 | 9     |
| UNIT II  |       |       |
| Searching and Sorting: Searching: Searching for an item in a data set using the following methods: (i) Linear Search (ii) Binary Search  Sorting: Sorting of data set in an order using the following methods: (i) Bubble Sort (ii) Selection Sort (iii) Insertion Sort (iv) Quick Sort (v) Merge Sort   | CLO 2 | 9     |
| UNIT III   |       |       |
| Linked List; Difference between Static and Dynamic Memory Allocation Introduction to Linked List, Terminologies: Node, Address, Pointer, Information field / Data field, Next pointer, Null Pointer, Empty List, Type of Lists: Linear List, Circular List, Representation of Doubly Linked List, Operations on a Singly Linked List: Creating a Linked List, Inserting a new node in a Linked List, Deleting a node from a Linked List, Searching a key in Linked List, Traversing a Singly Linked List, Applications of Linked List.   | CLO3  | 9     |
| UNIT IV  |       |       |
| Stack:-Introduction to Stack: Definition, Stack as an ADT, Operations on Stack-(Push, Pop), Stack Operation, Conditions — Stack Full / Stack Overflow, Stack Empty,/Stack Underflow,Stack Implementation using Array and representation using Linked List, Applications of Stack: Reversing a List, Polish Notations, Conversion of Infix to Postfix Expression, Evaluation of Prefix Expression.  Queue: Queue as an ADT, Queue representation in memory using Array and representation using a Linked List,, Types of Queues: Linear Queue, Circular Queue, Concept of Priority Queue, Double-Ended Queue, Queue Operations: INSERT, DELETE, Queue Operation Conditions: Queue Full, Queue Empty. Applications of Queue. | COL4  | 9     |
| UNIT V   |       |       |
| <b>Tree;-</b> Introduction to Trees Terminologies: Tree, Degree of a Node, Degree of a Tree, Level of a node, Leaf Node, Depth / Height of a Tree, In-Degree and Out- Degree, Path, Ancestor and Descendant Nodes, Tree Types and Traversal methods, Types of Trees: General Tree, Binary Tree, Binary Search Tree (BST). Binary Tree Traversal: In-Order Traversal, Preorder Traversal, and Post-Order Traversal. Expression Tree, Heap   | COL5  | 9     |
| Total Hours  |       | 45    |

# Course Contents and Syllabus:

#### **Practical Plan**

| Descriptors and Topics   | CLO    | Hours |
|--|--------|-------|
| UNIT I   |        |       |
| Introduction To Organizational Behaviour: The software quality challenge, Meaning of software quality, Software quality factors, Software Quality Lessons Learned, The components of the software quality assurance system, Pre-project software quality components: Contract Review, Development and quality plans, SQA components in the project life cycle: Integrating quality activities in the project life cycle, Assuring the quality of software maintenance components, Assuring the quality of external participants' contributions, CASE tools, Software quality infrastructure components, Pareto Principles, Total Quality Management, Ishikawa's Seven Basic Tools  | CLO 1  | 9     |
| UNIT II  |        |       |
| Software Quality Assurance Management: Management components of software quality: Project progress control, Software quality metrics, Costs of software quality, Standards, certification and assessment: Quality management standards, SQA project process standards – IEEE software engineering standards, Management and its role in software quality assurance, The SQA unit and other actors in the SQA system, Inspection as an Up-Front Quality Technique, Software Audit Methods, Software Safety and Its Relation to Software Quality Assurance, SQA for Small Projects, Development Quality Assurance, Quality Management in IT, Introduction to ITIL, Software Quality Assurance Metrics, Software Benchmarks and Baselines | CLO 2  | 9     |
| UNIT III   | CT 0.4 |       |
| Software Quality Assurance and Reliability: Software quality; Garvin's quality dimensions, McCall's quality factor, ISO 9126 quality factor; Software Quality Dilemma; Introduction to Capability Maturity Models (CMM and CMMI); Introduction to software reliability, reliability models and estimation., Quality tasks – SQA plan – Teams – Characteristics Implementation – Documentation – Reviews and Audits.  | CLO3   | 9     |
| UNIT IV  |        |       |
| Quality Control And Reliability: Tools for Quality – Ishikawa's basic tools – CASE tools Defect prevention and removal – Reliability models, Rayleigh model – Reliability growth models for quality assessment   | CLO4   | 9     |
| UNIT V   |        |       |
| <b>Software Quality Tools:</b> Total Quality Management, product quality metrics, in-process quality metrics, software maintenance, Ishikawa 7 basic tools, checklist, Pareto diagrams, Histogram, Run Charts, Scatter Diagram, Control Charts, Cause Effect Diagram, Defect Removal Effectiveness and Process Maturity Level.   | CLO5   | 9     |
| Total Hours  |        | 45    |

#### **Course Contents and Syllabus:**

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| Combinatorial Structures: Graph theory basics: Basic terminology of graphs, simple graph, degree of a vertex, degree sequence of a graph, first fundamental theorem of graphs, incident matrix and adjacent matrix Trees: Trees and their properties, binary tree, complete binary tree, full binary tree, binary search tree  | CLO 1 | 9     |
| UNIT II  |       |       |
| <b>Principles Of Counting:</b> The Principle of Inclusion and Exclusion, Generalizing Inclusion – Exclusion Principles, Derangements – Nothing is in its Right Place, Rook Polynomials   | CLO 2 | 9     |
| UNIT III   |       |       |
| <b>Combinatorial Analysis:</b> Basic counting principles (multiplication rule, addition rule), permutations and combinations, permutations of n dissimilar objects taken r at a time (with and without repetitions), permutation of n objects not all of which are different, combination of n objects taken r at a time, Binomial and multinomial theorems and its applications | CLO3  | 9     |
| UNIT IV  |       |       |
| <b>Probability:</b> Random experiment, sample space, events, axiomatic probability, algebra of events conditional probability, multiplication theorem of probability, independent events, bay's theorem  | CLO4  | 9     |
| UNIT V   |       |       |
| <b>Probability Distribution:</b> Probability density functions, cumulative distribution functions, expectation and variance, uniform and normal distributions, joint probability mass and density functions, marginal and conditional distributions, covariance and correlation  | CLO5  | 9     |

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| Fundamentals of Organizational Behaviour: Concept of Management, Nature of Management, What Managers Do - Managerial functions and roles, Levels of Management, Effective Management - Managerial skills and competencies, Characteristics of Quality Managers. Meaning of Organizational Behaviour, Contributing disciplines, Challenges and opportunities, Organizational Behaviour Models - Individual, Groups and Organizational.  | CLO 1 | 9     |
| UNIT II  |       |       |
| Individual Dynamics: Concept of Human Behaviour: Nature of People, Value of Person (Ethical Treatment). Personality: Definitions, Different types of Personality, Determinants of Personality - Matching Personality and Jobs; Perception: Definition, Factors influence perception, Person perception: Attribution theory, Errors, Shortcuts used in judgment, Importance of perception in Industry.  | CLO 2 | 9     |
| UNIT III   |       |       |
| Attitude & Learning: Attitude: Meaning, Characteristics, and components of Attitude, Attitude and Behaviour, Attitude Formation - Attitude, Job Satisfaction. Learning: Meaning, Characteristics, and Process of Learning. Theories of Learning: Classical Conditioning, Operant Conditioning. Learning and Organizational Behaviour Modification.   | CLO3  | 9     |
| UNIT IV  |       |       |
| Motivation And Group Dynamics: Nature of Motivation, Process of Motivation, Traditional & Contemporary theories on Motivation; Motivation application in Organization setup. Understanding the group behaviour, Types of Groups: Formal Group, Informal Group; Stages of group development. Group dynamics and Group cohesiveness. Group decision-making. Team: Types of Teams, Team Building and Managing Effective Team, Team Structure.   | CLO4  | 9     |
| UNIT V   |       |       |
| Interpersonal Dynamics & Organizational Dynamics: Module: 6 Interpersonal Dynamics 3 Sessions Communication – Symbols, Network, and Direction of Communication Flow, Barriers to Effective Communication, Interpersonal Communication; Interpersonal Conflicts & Negotiations. Organization Structure, Forms of Organization Structure; Organizational Climate, Organizational Culture: meaning, how employees learn organizational culture; Organizational Change: Concept, resistance to change, managing resistance to change; Leadership - Theories, Styles. Managing Stress: concept, causes of stress and coping strategies; Insights from Indian ethos. | CLO5  | 9     |
| Total Hours  |       | 45    |

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| Introduction & Concepts Of Classes And Objects: History of Java, Byte code, JVM, Java buzzwords, OOP principles, Data types, Variables, Scope and lifetime of variables, Operators, Control statements, Type conversion and casting, Arrays, Introducing methods, Method overloading, Constructors, Constructor overloading, Usage of static with data and method, Access control, this keyword, Garbage collection, String class, String Tokenizer.                 | CLO 1 | 9     |
| UNIT II  |       |       |
| Inheritance & Packages: Inheritance basics, Types of inheritance, Member access rules, Usage of super keyword, Method overriding, Usage of final, Abstract classes, Interfaces - differences between abstract classes and interfaces, defining an interface, implementing an interface, applying interfaces, variables in interface and extending interfaces; Packages - defining, creating and accessing a package, importing packages, access control in packages. | CLO 2 | 9     |
| UNIT III   |       |       |
| Exception Handling and Multithreading: Concepts of exception handling, Types of exceptions, Usage of try, catch, throw, throws, and finally keywords, Built-in exceptions, Creating user-defined exceptions; MULTITHREADING: Concepts of multithreading, Differences between process and thread, Thread life cycle, creating multiple threads using Thread class and Runnable interface, Synchronization, Thread priorities, Inter thread communication.             | CLO 3 | 9     |
| UNIT IV  |       |       |
| <b>Collection Framework:</b> Collections Overview, Collection Interfaces - List, Set, Map, List - Array List, Linked List, Vector, Set - HashSet, Tree Set, Map - Hash Table, HashMap, Accessing a collection via an Iterator, comparator, comparable.   | CLO 4 | 9     |
| UNIT V   |       |       |
| GUI Programming with Swing: Applets - Applet Class, Applet skeleton, Simple Applet; Delegation event model - Events, Event sources, Event Listeners, Event classes, handling mouse and keyboard events.  EXPLORING SWING CONTROLS: JLabel and Image Icon, JText Field, JButton, JCheckBox, JRadioButton, JTabbed Pane, JList, JCombo Box.  | CLO 5 | 9     |
| Total Hours  |       | 45    |

#### **TEXT BOOKS:**

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| Introduction: Big data- Concepts, Needs and Challenges of big data. Types and source of big data. Components of Hadoop Eco System- Data Access and storage, Data Intelligence, Data Integration, Data Serialization, Monitoring, Indexing.  | CLO 1 | 9     |
| UNIT II   |       |       |
| <b>Apache Pig:</b> Introduction, Parallel processing using Pig, Pig Architecture, Grunt, Pig Data Model-scalar and complex types. Pig Latin- Input and output, Relational operators, User defined functions. Working with scripts.  | CLO 2 | 9     |
| UNIT III  |       |       |
| <b>Apache Hive Fundamentals &amp; Advanced Concepts:</b> Introduction-Hive modules, Data types and file formats, Hive QL-Data Definition and Data Manipulation, Hive QL queries, Hive QL views- reduce query complexity. Hive scripts. Hive QL Indexes-create, show, drop. Aggregate functions. Bucketing vs Partitioning   | CLO3  | 9     |
| UNIT IV   |       |       |
| Importing And Handling Relational Data In Hadoop Using Sqoop: Relational database management in Hadoop: Bi directional data transfer between Hadoop and external database. Import data- Transfer an entire table, import subset data, use different file format. Incremental import import new data, incrementally import data, preserving the value  | CLO4  | 9     |
| UNIT V  |       |       |
| Scoop And Solr: Export transfer data from Hadoop, update the data, update at the same time, and export a subset of columns. Hadoop ecosystem integration- import data to the hive, using partitioned hive tables, replace special delimiters.  Introduction. Information retrieval search engine, categories of data, inverted index. Design- field attributes and types. Indexing- indexing tool. Indexing operations using CSV documents. Searching data-parameters, default query. | CLO5  | 9     |
| Total Hours   |       | 45    |

| Descriptors and Topics  | CLO | Hours |
|---|-----|-------|
| UNIT I  |     |       |
| <b>Introduction:</b> Definition and goals, Design issues, Network architecture-broadcast & point to point, Models-OSI reference & TCP and IP and their comparative study, |     | 9     |
| Network classification-LAN, WAN & MAN, protocols & services, types of service-  |     |       |
| connection oriented and connectionless, different protocols. Transmission Media:  |     |       |
| Twisted Pair, Coaxial cable, Fiber optic cable, Wireless transmission, telephone  |     |       |

| Learn   Grow   Achieve   |       |    |
|--|-------|----|
| system, multiplexing, switching-circuit, packet & message switching, Virtual circuit       |       |    |
| switch. Network devices-repeater, bridge, router, gateways, network interface cards,       |       |    |
| cabling system   |       |    |
| UNIT II  |       |    |
| Wireless Transmission: Communication Satellites - Telephone System: Structure,             | CLO 2 | 9  |
| Local Loop, Trunks and Multiplexing and Switching. Data Link Layer: Design Issues -        |       |    |
| Error Detection and Correction.  |       |    |
| UNIT III   |       |    |
| <b>Elementary Data Link Protocols :</b> Framing, Error control-Bit Error, causes of error, | CLO3  | 9  |
| control methods, Flow control: Stop & wait, sliding window concept, piggybacking.          |       |    |
| Local Area Network Technology: Protocols- Aloha, CSMA, CSMA and CD, Collision              |       |    |
| free protocols, IEEE 802 protocols, standard- topologies, cabling system, Network          |       |    |
| management, MAC addressing frame format. Ethernet.   |       |    |
| UNIT IV  |       |    |
| Network Layer: Introduction, features & design issues, Routing- different routing          | CLO4  | 9  |
| algorithms, congestion control, Internetworking- Concepts and architecture.                |       |    |
| Addressing-IP Addressing and subnet masking, IP protocols, Network Address                 |       |    |
| Translation, Address resolution protocol (ARP).  |       |    |
| UNIT V   |       |    |
| Transport Layer: Introduction, design issues, Transport layer addressing, buffering,       | CLO5  | 9  |
| multiplexing, recovery, TCP and IP suit of protocols- TCP & UDP Network                    |       |    |
| applications, Connection establishment, Connection release, TCP Header.                    |       |    |
| Total Hours  |       | 45 |

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| Introduction: Introduction to Information Security, principles, services and attacks, functional requirements of security, current trends in security, Need for security, Security approaches  Database and OS Security: Introduction to database, Security requirements of database, sensitive data, Database access control, inference, Security in operating systems   | CLO 1 | 6     |
| UNIT II   |       |       |
| Cryptography and Authentication: Cryptography: Concept: Symmetric and Asymmetric Cryptography. Mathematics of cryptography: Modular Arithmetic Additive Inverse, Multiplicative Inverse, Euclidean Algorithm and Extended Euclidean Algorithm. Stream Cipher and Block Cipher, Concept of Confusion and Diffusion. Modes of Operation of Block Cipher: ECB, CBC, OFB, CFB, DES, RSA, Numerical on RSA Authentication: Types of authentication, Biometric Authentication and Third Party Authentication using KDC and Kerberos Version 5, Mutual authentication, reflection attack | CLO 2 | 6     |
| UNIT III  |       |       |
| Digital certificates and integrity Digital Signature: Concept, Compare Digital Signature with Public Key Cryptography, Digital Signature Schema. Public Key Infrastructure (PKI): Private key management, Public Key Cryptography Standards (PKCS). Digital Certificate Creation Steps, X.509 Certificate, Certificate Revocation  Integrity: Message Integrity, Hash functions Properties Algorithm: MDC, MAC, HMAC, MD5, SHA -512   | CLO 3 | 6     |
| UNIT IV   |       |       |
| Internet and web security: SSL, IPSec, Email Security- PGP, Email attacks Web services Security: web app versus web service concept, WS-Security, SOAP web service, SAML assertion, Browser attacks, web attacks targeting users, obtaining user or website data.   | CLO 4 | 6     |
| UNIT V  |       |       |
| Firewall and IDS Firewall: Introduction, Characteristic, Types: Packet Filter, Stateful and Stateless Packet Filter, Attacks of Packet Filter, Circuit Level and Application Level Firewall, Bastion Host, Firewall Configurations.  Intrusion: What is Intrusion, Intruders, Intrusion Detection, Behaviour of Authorized user and Intruder, Approaches for Intrusion Detection: Statistical Anomaly Detection and Rule based Detection. Audit Record and Audit Record Analysis.   | CLO 5 | 6     |
| Total Hours   |       | 30    |

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| Cloud Fundamentals: Cloud computing- Origin of Cloud Computing, Definition. Essential characteristics- On-demand self-service, Broad network access, Location independent resource pooling, Rapid elasticity, Measured service. Comparing cloud providers with traditional IT service providers. Roots of cloud computing, Application of Cloud Computing. Introduction to Cloud Platforms- AWS, Azure, GCP.  | CLO 1 | 9     |
| UNIT II   |       |       |
| Application Architectures: Architectural influences — High- performance computing, Utility and Grid computing, Cloud scenarios. Benefits: scalability, simplicity, vendor flexibility, security; Limitations: Sensitive information, Application development-security level of third party, Regularity issues- Government policies. Cloud Application Architecture Monolithic and Distributed, Micro Service fundamentals, Design Approach — Cloud Native Application — Application Integration Process. API fundamental — API Management | CLO 2 | 9     |
| UNIT III  |       |       |
| Cloud Architecture- Layers and Models: Layers in cloud architecture, Software as a Service (SaaS), features of SaaS and benefits, Platform as a Service (PaaS), features of PaaS and benefits, Infrastructure as a Service (IaaS), features of IaaS and benefits, Service providers, challenges and risks in cloud adoption. Cloud deployment model: Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing  | CLO3  | 9     |
| UNIT IV   |       |       |
| Cloud Simulators- CloudSim and GreenCloud: Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture User code, CloudSim, GridSim. Understanding Working platform for CloudSim, Introduction to GreenCloud   | CLO4  | 9     |
| UNIT V  |       |       |
| <b>Introduction to VMWare Simulator:</b> Basics of VMWare, advantages of VMware virtualization, using Vmware workstation, creating virtual machines-understanding virtual machines, creating a new virtual machine on local host, cloning virtual machines, virtualizing a physical machine, starting and stopping a virtual machine  | CLO5  | 9     |
| Total Hours   |       | 45    |

| Course L                 | earning Out   | tcomes (CL        | O):              | reinforcement learning methods.  Students will be able to:  1. Understand basic mathematical and statistical tools required for engineering  2. Implement a bridge between the elementary statistical tools and probability theory  3. Ability to implement various data analytics techniques to visualize the data.  4. Implement an appropriate method based on the interpolation.  5. Apply machine learning algorithms to solve a given problem using Python programming.  |   |  |        |  |

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| Introduction to Data Science; What is Data Science and why it is important?, Role of Data Scientist and skills required, Data acquisition: sources of data, data formats, data cleaning, etc., Exploratory Data Analysis (EDA): statistical analysis, data visualization techniques, Introduction to libraries/tools: NumPy, Pandas, Matplotlib, Seaborn, etc  | CLO 1 | 9     |
| UNIT II  |       |       |
| Introduction to Data Cleaning, The importance of integrity of data, Regular Expressions, Tools and Techniques for Data Cleaning, Effective data cleaning techniques: Remove duplicates, Remove irrelevant data, Standardize capitalization, Convert data type, Clear formatting, Fix errors, Language translation, Handle missing values, Optimize the data-cleaning process, Data Cleaning using Python   | CLO 2 | 9     |
| UNIT III   |       |       |
| Fundamentals of Machine Learning: Introduction to Machine Learning and its Importance Types of Machine Learning: Supervised, Unsupervised, and Reinforcement Learning, Basic concepts: features, labels, training data, etc., Popular Machine Learning algorithms: Linear Regression, Logistic Regression, Decision Trees, kNearest Neighbors, etc., Evaluation metrics for Machine Learning models: accuracy, precision, recall, F1-score, etc.     | CLO3  | 9     |
| UNIT IV  |       |       |
| Machine Learning Techniques: Data preprocessing techniques handling missing data, feature scaling, feature encoding, etc., Mode selection and hyperparameter tuning, Cross-validation techniques Ensemble methods: Bagging, Boosting, Random Forests, etc. Introduction to deep learning and neural networks   | CLO4  | 9     |
| UNIT V   |       |       |
| Advanced Topics and Applications;— Advanced Machine Learning techniques: Support Vector Machines (SVM), Neural Networks, Convolutional Neural Networks (CNN), Recurrent Neural Networks (RNN), etc., Natural Language Processing (NLP) and its applications, Introduction to Big Data technologies: Hadoop, Spark, etc., Case studies and real-world applications in various domains, Future trends and career prospects in AI, ML, and Data Science | CLO5  | 9     |
| Total Hours  |       | 45    |

Apply sampling methods to solve a given problem using Python -Programming.  |  |                    |                       |  |

#### **Practical Plan**

| Practical<br>No. | Week<br>No. and<br>Turn 1 | Practical Title   | CLO  | Hours |
|------------------|---------------------------|---|------|-------|
| 1                | Week 1                    | Load a dataset (e.g., Iris dataset, Titanic dataset) into Python using Pandas. Explore the dataset by: Displaying the first few rows. Checking for missing values. Calculating summary statistics. Visualizing distributions of numerical variables.                      | CLO2 | 2     |
| 2                | Week 2                    | Perform data preprocessing tasks such as: · Handling missing values (e.g., imputation, deletion). · Encoding categorical variables (e.g., one-hot encoding, label encoding). · Scaling numerical features (e.g., standardization, normalization).                         | CLO2 | 2     |
| 4                | Week 3                    | Implement a supervised learning algorithm (e.g., decision tree classifier, logistic regression) using Scikit-learn. Train the model on a training set and evaluate its performance on a test set using appropriate metrics (e.g., accuracy, precision, recall, F1-score). | CLO2 | 2     |
| 5                | Week 4                    | Experiment with different hyperparameters of the supervised learning model (e.g., max_depth for decision trees, C for logistic regression) and observe how they affect model performance.   | CLO2 | 2     |
| 6                | Week 5                    | Apply an unsupervised learning algorithm (e.g., K-means clustering, hierarchical clustering) to a dataset. Explore the resulting clusters and interpret the findings.   | CLO2 | 2     |
| 7                | Week 6                    | Use dimensionality reduction techniques (e.g., Principal Component Analysis, t-SNE) to visualize high-dimensional data in two or three dimensions. Discuss the insights gained from the visualization.  | CLO2 | 2     |
| 8                | Week 7                    | Split a dataset into training and testing sets using cross-validation techniques (e.g., k-fold crossvalidation, stratified cross-validation). Train a machine learning model on multiple folds and compute the average performance metrics                                | CLO3 | 2     |
| 9                | Week 8                    | Perform model selection by comparing the performance of multiple algorithms (e.g., decision tree, random forest, support vector machine) on a given dataset. Choose the best-performing model based on evaluation metrics.  | CLO3 | 2     |

| Grow   Achieve |   | ĺ   |   |
|----------------|---|---|---|
| Week 9         | Explore ensemble learning techniques (e.g., bagging, boosting) by implementing ensemble models such as Random Forest or Gradient Boosting Machines. Compare the performance of ensemble models with individual base models.                                   | CLO3  | 2   |
| Week 10        | Implement a neural network model using TensorFlow or PyTorch. Design the architecture of the neural network (e.g., number of layers, activation functions) and train the model on a dataset. Evaluate the performance of the neural network on a test set.    | CLO4  | 2   |
| Week 11        | Choose a real-world dataset related to a specific domain (e.g., healthcare, finance, retail). Apply appropriate machine learning techniques to solve a relevant problem, such as predicting customer churn, diagnosing diseases, or forecasting stock prices. | CLO4  | 2   |
| Week 12        | Present the results of your analysis in a clear and interpretable manner, using data visualization techniques (e.g., plots, charts) to communicate insights to stakeholders.  | CLO4  | 2   |
| Week 13        | Load a dataset using Pandas and perform basic data exploration tasks such as checking for missing values and visualizing data distributions   | CLO4  | 2   |
| Week 14        | Preprocess the data by handling missing values, encoding categorical variables, and scaling numerical features.   | CLO4  | 2   |
| Week 15        | For relevant datasets make prediction models for the following  1. Naïve Bayes Classifier   | CLO4  | 2   |
| Week 16        | 2. Simple Linear Regression multiple linear regression  | CLO5  | 2   |
| Week 17        | 3. Polynomial Regression  | CLO5  | 2   |
| Week 18        | 4. Lasso and Ridge Regression   | CLO5  | 2   |
| Week 19        | 5. Logistic regression  | CLO5  | 2   |
| Week 21        | 6. Artificial Neural Network  | CLO5  | 2   |
| Week 22        | 7. k-NN classifier  | CLO5  | 2   |
|                | Week 10  Week 11  Week 12  Week 13  Week 14  Week 15  Week 16  Week 17  Week 18  Week 19  | Week 10 Week 10 Week 10 Week 10 Week 10 Week 11 Choose a real-world dataset related to a specific domain (e.g., healthcare, finance, retail). Apply appropriate machine learning techniques (e.g., plots, charts) to communicate insights to stakeholders.  Week 12 Present the results of your analysis in a clear and interpretable manner, using data visualization techniques (e.g., plots, charts) to communicate insights to stakeholders.  Week 13 Load a dataset using Pandas and perform basic data exploration tasks such as checking for missing values and visualizing data distributions  Week 14 Preprocess the data by handling missing values, encoding categorical variables, and scaling numerical features.  Week 15 For relevant datasets make prediction models for the following 1. Naïve Bayes Classifier  Week 17 3. Polynomial Regression  Week 18 4. Lasso and Ridge Regression  Week 19 5. Logistic regression  Week 21 6. Artificial Neural Network | Week 9       Explore ensemble learning techniques (e.g., bagging, boosting) by implementing ensemble models such as Random Forest or Gradient Boosting Machines. Compare the performance of ensemble models with individual base models.         Week 10       Implement a neural network model using TensorFlow or PyTorch. Design the architecture of the neural network (e.g., number of layers, activation functions) and train the model on a dataset. Evaluate the performance of the neural network on a test set.       CLO4         Week 11       Choose a real-world dataset related to a specific domain (e.g., healthcare, finance, retail). Apply appropriate machine learning techniques to solve a relevant problem, such as predicting customer churn, diagnosing diseases, or forecasting stock prices.       CLO4         Week 12       Present the results of your analysis in a clear and interpretable manner, using data visualization techniques (e.g., plots, charts) to communicate insights to stakeholders.       CLO4         Week 13       Load a dataset using Pandas and perform basic data exploration tasks such as checking for missing values and visualizing data distributions       CLO4         Week 14       Preprocess the data by handling missing values, encoding categorical variables, and scaling numerical features.       CLO4         Week 15       For relevant datasets make prediction models for the following 1. Naïve Bayes Classifier       CLO5         Week 16       2. Simple Linear Regression multiple linear regression       CLO5         Week 17       3. Polynomial Regression       CLO5         Week 19       5 |

| 23 | Week 23 | 8. Decision tree classification | CLO5 | 2 |
|----|---------|---------------------------------|------|---|
| 24 | Week 24 | 9. SVM classification           |      | 2 |
| 25 | Week 25 | 10. K-Means Clustering          | CLO5 | 2 |
| 26 | Week 26 | 11. Hierarchical Clustering     | CLO5 | 2 |

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| Introduction: Programming in the small vs. programming in the large; software project failures and importance of software quality and timely availability; of software engineering towards successful execution of large software projects; emergence of software engineering as a discipline, Software Engineering Historical Development from Jackson Structured Programming to Agile Development. Use and apply Visualization techniques for planning the activities related to Software projects. | CLO 1 | 9     |
| UNIT II   |       |       |
| Project Evaluation And Activity Planning: Step-wise approach for planning the software project, Product break down structure for identifying the project activities, Strategic Assessment, Technical Assessment, Cost Benefit Evaluation Techniques, Risk Evaluation Objectives, Project Schedule, Activity-based approach, Product-based approach, Hybrid approach Sequencing and Scheduling Activities, Network Planning Models, Forward Pass, Backward Pass, Scheduling, PERT techniques, CRM.     | CLO 2 | 9     |
| UNIT III  |       |       |
| <b>Risk Management And Monitoring:</b> Nature Of Risk, Types Of Risk, Managing Risk, Software project risk and strategies to reduce the risk, PERT using three estimates, Creating Framework, Collecting The Data, Visualizing Progress, Cost Monitoring  | CLO3  | 9     |
| UNIT IV   |       |       |
| Control And Organizing Teams: Creating Framework, Decision making, cost Monitoring, Change Control , Managing Contracts , Introduction , Types Of Contract, Contract Management., Introduction, Understanding Behaviour, Organizational Behaviour: A Background , Selecting The Right Person For The Job , Working in group, Decision Making, Leadership.   | CLO4  | 9     |
| UNIT V  |       |       |
| <b>Project Management:</b> Team structure, Project tracking - Managing the contract, change control, Team management, Communication, Software Configuration Management.   | CLO5  | 9     |
| Total Hours   |       | 45    |

#### Textbooks:

| Descriptors and Topics   | CLO   | Hours |
|--|-------|-------|
| UNIT I   |       |       |
| Introduction to Research Methodology: Introduction- Definition, Significance of Research. Objectives of Research. Types of Research. Research Methods versus Methodology. Research Process, Criteria of Good Research, Problems Encountered by Researchers in India. Research in Computer Applications.  Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.   | CLO 1 | 9     |
| UNIT II  |       |       |
| Reviewing The Literature: Concept & use of Literature Review, Review of the literature, Searching the existing literature, Reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed.  Measurement and Scaling: Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement, Techniques of Developing Measurement Tools, Scaling, Scale Classification Bases, Scaling Techniques.  Data Collection: Introduction, Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method. | CLO 2 | 9     |
| UNIT III   |       |       |
| Research & Sample Design: Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs.  Design of sample surveys: Design of Sampling: Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs.  | CLO 3 | 9     |
| UNIT IV  |       |       |
| Testing Of Hypotheses & Analysis: Hypothesis: Basic Concepts, Formation. Testing of Hypotheses: Test Statistics and Critical Region, Critical Value and Decision Rule.  Procedure for Hypothesis Testing. Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances. Level of Significance, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis. Chi-square Test.  | CLO 4 | 9     |
| UNIT V   |       |       |
| <b>Report writing:</b> Meaning and types of research reports, significance of report writing. Structure and components of a research paper: Title Page, Abstract, Introduction, review of literature, Methodology, Results, Discussion and Conclusion, References. Guidelines for writing an effective research paper. Citation styles (APA/MLA/Chicago)  Plagiarism and ethical considerations in research writing.   | CLO 5 | 9     |
| Total Hours  |       | 45    |

#### **Textbooks:**

- 1. Research Methodology: Methods and Techniques C.R. Kothari, Gaurav Garg New Age international 4th Edition, 2018
- 2. Research Methodology a step-by step guide for beginners. (For the topic Reviewing the literature under module 2) Ranjit Kumar SAGE Publications Ltd 3rd Edition, 2011
- 3. Study Material (For the topic Intellectual Property under module 5) Professional Programme Intellectual Property Rights, Law and Practice, The Institute of Company Secretaries of India, Statutory Body Under an Act of Parliament, September 2013

#### **Reference Books:**

- 1. Research Methods: the concise knowledge base Trochim Atomic Dog Publishing 2005
- 2. Business Research Methods, William G. Zimkmund, CENGAGE Learning
- 3. Conducting Research Literature Reviews: From the Internet to Paper Fink A Sage Publications 2009

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| <b>Cryptography and Technical Foundations</b> : Cryptographic primitives, Asymmetric cryptography, Public and private keys. Cryptocurrency: History, Distributed Ledger, Bitcoin protocols - Mining strategy and rewards, Ethereum - Construction, DAO, Smart Contract, GHOST, Vulnerability, Attacks, Sidechain, Namecoin. | CLO 1 | 9     |
| UNIT II   |       |       |
| Cryptocurrency Regulation: : Stakeholders, Roots of Bit coin, Legal Aspects-Crypto currency Exchange, Black Market and Global Economy. Applications: Internet of Things, Medical Record Management System, Domain Name Service and future of Blockchain. Decentralization and Cryptography                                  | CLO 2 | 9     |
| UNIT III  |       |       |
| <b>Bitcoin and Alternative Coins A:</b> Bitcoin, Transactions, Blockchain, Bitcoin payments B: Alternative Coins, Theoretical foundations, Bitcoin limitations, Namecoin, Litecoin, Primecoin, Zcash  | CLO3  | 9     |
| UNIT IV   |       |       |
| <b>Bit Coin and Crypto currency:</b> What is Bitcoin, The Bitcoin Network, The Bitcoin Mining Process, Mining Developments, Bitcoin Wallets, Decentralization and Hard Forks, Ethereum Virtual Machine (EVM), Merkle Tree   | CLO4  | 9     |
| UNIT V  |       |       |
| <b>Privacy, Security issues in Blockchain:</b> Pseudo-anonymity vs. anonymity, Zcash and Zk-SNARKS for anonymity preservation, attacks on Blockchains: Sybil attacks, selfish mining, 51% attacks advent of algorand; Sharding based consensus algorithms to prevent these attacks  | CLO5  | 9     |
| Total Hours   |       | 45    |

| Descriptors and Topics  | CLO   | Hours |
|---|-------|-------|
| UNIT I  |       |       |
| CI & CD, Organizing For Devops,, Measuring Devops (Vanity metrics vs. Actionable metrics), Comparison of DevOps to Site Reliability Engineering, Organizational Impact of DevOps, Agile Roles and the Need for Training, Working Agile  | CLO 1 | 9     |
| UNIT II   |       |       |
| <b>Agile Development and Scrum:-</b> Scrum, The 3 Roles of Scrum, Organizational impact of Agile, Mistaking Iterative Development for Agile, Kanban and Agile Planning Tools, framework for applying Agile, Sprint Planning   | CLO 2 | 9     |
| UNIT III  |       |       |
| Introduction to Containers w/ Docker, Kubernetes & OpenShift:- ,:- Introduction to Containers, Introduction to Docker, Docker Objects, Docker Architecture, Introduction to Kubernetes, Kubernetes Architecture, ReplicaSet, Autoscaling, Introduction to Red Hat OpenShift                             | CLO3  | 9     |
| UNIT IV   |       |       |
| Application Development using Microservices and Serverless: Twelve-Factor App Methodology, Twelve-Factor App Methodology, Making API Requests using CURL and Postman, The Serverless Framework, IBM Cloud Code Engine, Building Container Images for Microservices, Deploying and Running Applications, | CLO4  | 9     |
| UNIT V  |       |       |
| Introduction to Test and Behavior Driven Development:- Testing Levels and Release Cycle, TDD and BDD, Anatomy of a Test Case, Writing Test Assertions, Factories and Fakes, Mocking with Patch, Behavior Driven Development, BDD Workflow and Gherkin Syntax, Writing Feature Files,                    | CLO5  | 9     |
| Total Hours   |       | 45    |
