B.Sc. (Cyber Security)

(2025 Pattern)

School of Computer Applications

Effective from

Academic Year 2025-26

Program Curriculum

Preamble:

At Pimpri Chinchwad University, we present the Bachelor of Science (Cyber Security), an Undergraduate Program designed to equip students with a comprehensive understanding of Computer Science and Cyber Security. As aspiring professionals in the field of computing, we acknowledge the weight of responsibility that accompanies our education. Upholding the highest standards of integrity, professionalism, and ethical conduct is fundamental to our academic pursuits and beyond. We embrace the imperative of continuous learning and adaptability in an era marked by rapid technological advancement, pledging to proactively seek new knowledge and master emerging technologies.

The BSc (Cyber Security) program curriculum is designed to provide students with the practice of protecting computer systems, networks, and data from digital threats, such as unauthorized access, data breaches, malware, and other cyber-attacks.

Overall, an BSc (Cyber Security) program aims to provide students with a well-rounded education that prepares them for a successful career in the IT industry and for further academic pursuits.

Vision and Mission of Program:

Vision:

Explore the different horizons in the field of Cyber Security, digital threats, data breaches and Cyberattacks.

Mission:

Develop a strong foundation in computer science and information technology. Cultivate smart and ethical cybersecurity professionals and entrepreneurs globally.

Program Educational Objectives:

Here are some possible Program Educational Objectives (PEOs) for a Bachelor of Science (Cyber Security).

- 1. To prepare youth to take up positions as Secure software designers and developers.
- 2. To aim at the development of knowledge and skills for defending and developing secure software systems.
- To prepare students with social interaction skills, communication skills, life skills, entrepreneurial skills, and research skills which are necessary for career growth and for leading a quality life.

Program Outcome

Here are some possible Program Outcomes (POs) for a Bachelor of Science (Cyber Security) program: -

- **PO 1:** Develop Core Competencies: The program aims to develop the core competencies required for a career in computer science and Cyber Security.
- **PO 2:** Develop Practical Cybersecurity Skills: The program focuses on equipping students with practical skills required for securing computer systems and networks.
- **PO 3:** Analyze and Mitigate Security Risks: The program emphasizes the importance of risk management and equips students with the knowledge to make informed decisions regarding security measures.
- **PO 4:** Foster Ethical and Professional Practices: The program instills ethical and professional values in students, emphasizing the importance of integrity, privacy, and responsible use of cybersecurity knowledge and skills.
- **PO 5:** Promote Critical Thinking and Problem-Solving Abilities: The program aims to develop students' analytical and problem-solving skills in the context of cybersecurity.
- **PO 6:** Collaborate and Communicate Effectively: The program emphasizes the importance of teamwork and effective communication skills. These skills are essential for working effectively in multidisciplinary cybersecurity teams and conveying complex concepts to various stakeholders.
- **PO 7:** Stay Updated with Emerging Technologies and Trends: The program aims to keep students abreast of the rapidly evolving field of cybersecurity. They are encouraged to stay updated with emerging technologies, trends, and research advancements in cybersecurity.
- **PO 8:** Establishing strategies in developing and implementing ideas in multi- disciplinary environments using computing, cyber security and management skills as a member or leader in a team.
- PO 9: Contribute to progressive community and society in comprehending different cyber security activities.
- **PO 10:** Gain confidence for self and continuous learning to improve knowledge and competence as a member or leader of a team.
- **PO11:** Communication Skills: Express thoughts and ideas effectively in writing and orally; communicate with others using appropriate medium; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.
- **PO12:** Self-directed and Life-long Learning: Acquire the ability to engage in independent and life-long learning in the broadest context of socio-technological changes to identify and detect Cyber Vulnerabilities and resolve new Cyber Threats.

Program Specific Outcomes

On successful completion of the programme, the graduates of Bachelor of Science (Cyber Security) programme will be able to:

PSO1: -Resolve security issues in computer networks and maintenance of Cyber Security systems to secure an IT infrastructure.

PSO2: -Provide Security Based Solutions with to solve real life problems like malware, phishing, spamming and other Cyber Threats, related to Cyber Security.

PSO3: -Design, Implement, and Monitor-Cyber Security Mechanisms, to ensure the protection of Information Technology Assets through Advanced Penetration Testing and Reverse Engineering to get to know the perspective of Cyber Criminals.

Course Contents and Syllabus:

Descriptors and Topics	CLO	Hours
UNIT I: Introduction to Programming and Basics of C		
Introduction to problem solving using computers, Problem solving steps, Algorithms-definition, characteristics, examples, advantages and limitations, Flowcharts - definition, notations, examples, advantages and limitations, Comparison with algorithms, History of 'C' language, Features of 'C', Limitations of 'C', Structure of a 'C' program, 'C' Program development life cycle, Function as building blocks, 'C' tokens, Character set, Keywords, Identifiers	CLO 1	9
UNIT II: Control Statements in C		

String Literals, string variables, declaration, definition, initialization, Syntax and use of	CLO5	9
UNIT V: String and File Handling		
value / address, Pointers and structures.		
functions- Passing each member of structure as a separate argument, Passing structure by		
Accessing structure members, Nested Structures, Arrays of Structures, Structures and		
Types of pointers, Concept of structure, definition and initialization, use of typedef,		
leak, dangling pointers.		
management- Allocation(malloc(),calloc()), Resizing(realloc()),Releasing (free()), Memory		
Multiple indirection (pointer to pointer), Functions and pointers- Passing pointer to function, Returning pointer from function, Function pointer, Dynamic memory		
arithmetic, Relationship between Arrays & Pointers- Pointer to array, Array of pointers,		
Introduction to Pointers. Declaration, definition, initialization, dereferencing, Pointer	CLO4	9
UNIT IV: Pointers and Structure		
two-dimensional array (row major and column major), Passing arrays to function.		
Operations - declaration, initialization, accessing array elements, Memory representation of		
Concept of array, Types of Arrays – One, Two and Multidimensional array, Array		
reference), return statement, Recursive functions, Scope of variables and Storage classes,		
defined functions:- declaration, definition, function call, parameter passing (by value, by	CLOS	
Concept of function, Advantages of Modular design, Standard library functions, User	CLO3	9
UNIT III: Functions and Array in C		
substitution directive, argumented and nested macro, Macros versus functions		
Preprocessor, Format of preprocessor directive, File inclusion directives (#include), Macro		
break and continue, Nested structures, Unconditional branching (goto statement), Role of		
switch and conditional operator, Loop control structures:- while ,do while, for, Use of		
String input and output, Formatted input and output, Decision making structures:- if ,if-else,		
of operators, Operator precedence and Order of evaluation, Character input and output,		
Variables, Constants (character, integer, float, string, escape sequences, enumeration constant), Data Types (Built-in and user defined data types), Operators, Expressions, types	CLO 2	9

Course Lo	earning Outc	omes (CLO):	•	Students	would be able to:		
				1. V	Write simple progr	ams using funda	mental C
					concepts like data		
					expressions.	,	1
					mplement decisio		rative structures
					n C to solve logica		
					Apply modular pro		epts using
					unctions, arrays, a		
					Demonstrate know nanagement, and s		
				5. Perform file handling operations and implement string manipulations using C language features.			

Course Contents/Syllabus:

Practical Plan

Activity Number	Assignment/Practical /Activity Title	Week Number/ Turn	Details	CLO	Hours
	Introduction to Programming and Basics of C	Week 1 / Turn 1 and 2	Problem 1: Write a C program to display "Welcome to C Programming" on the screen.	CLO1	4
1			Problem 2: Write a C program to display your name, roll number, and course details.		
2	Introduction to Programming and Basics of C	Week 2/	Problem 1: Write a program to demonstrate the use of arithmetic, relational, and logical operators.		
		Turn 1 and 2	Problem 2: Convert temperature from Fahrenheit to Celsius and vice versa using mathematical expressions.	CLO1	4
			Problem 3: Write a C program that contains syntax errors and debug it using an IDE.		
3	Introduction to Programming and Basics of C	Week 3/ Turn 1 and 2	Problem 1: Draw a flowchart and write an algorithm to find the largest of three numbers. Then, implement the program in C.	CLO1	4
			Problem 2: Draw a flowchart and write a C program to calculate the area and circumference of a circle.		
4	Control Statements in C	Week 4/ Turn 1 and 2	Problem 1: Write a program to check whether a given number is even or odd using an if-else statement.	CLO2	4
			Problem 2: Develop a program that determines if a person is eligible to vote based on their age.		
5	Control Statements in C		Problem 1: Write a C program to implement a simple calculator using switch case.	CLO2	4
		Week 5/ Turn 1 and	Problem 2: Write a C program to print the factorial of a number using		

		2	a for loop.		
			Problem 3: Develop a program that takes a student's marks as input and assigns grades using the conditional operator.		
6	Control Statements in C	Week 6/	Problem 1: Write a program to print the multiplication table of a given number using a for loop.	CLO2	4
		Turn 1 and 2	Problem 2: Implement a program that calculates the sum of the first N natural numbers using a while loop.		
			Problem 3: Write a C program to check whether a number is prime using while or do-while loop.		
7	Functions and Array in C	Week 7/	Problem 1: Write a C program to calculate the sum of digits of a number using a function.	CLO3	4
		Turn 1 and 2	Problem 2: Write a C program to calculate the GCD of two numbers using recursion.		
8	Functions and Array in C	Week 8/	Problem 1: Write a C program to find the average of elements in an array.	CLO3	4
		2	Problem 2: Write a program to perform a linear search in an array.		
9	Functions and Array in C	Week 9/	Problem 1: Write a C program to perform matrix addition/subtraction.		
		Turn 1 and 2	Problem 2: Write a C program to pass an array to a function and find the largest element.	CLO3	4
10	Pointers and Structure	Week 10/	Problem 1: Write a C program to demonstrate pointer arithmetic operations.		
		Turn 1 and 2	Problem 2: Write a C program to swap two numbers using call by reference.	CLO4	4
11	Pointers and Structure	Week 11/ Turn 1 and 2	Problem 1: Write a C program using structures to store and display student information (name, roll no,	CLO4	4

			marks).		
			Problem 2: Write a C program to demonstrate an array of structures.		
12	Pointers and Structure	Week 12/	Problem 1: Write a C program using pointers and structures to calculate the total and average marks of students.		
		Turn 1 and 2	Problem 2: Write a program using an array of structures to store and display data of 5 employees.	CLO4	4
13	String and File Handling	Week 13/ Turn 1 and 2	Problem 1: Write a C program to implement predefined string functions like strlen(), strcpy(), strcmp(), strcat().	CLO5	4
			Problem 2: Write a C program to read and write a string using pointers.		
14	String and File Handling	Week 14/ Turn 1 and 2	Problem 1: Write a C program to accept command-line arguments and print them. Problem 2: Write a C program to write data to a file and read it back.	CLO5	4
15	String and File Handling	Week 15/ Turn 1 and 2	Problem 1: Write a C program to perform random access operations on a file.	CLO5	4
			Problem 2: Write a C program to count the number of characters, words, and lines in a file.		
Total					60 hours

Course Contents and Syllabus:

Descriptors and Topics	CLO	Hours
UNIT I Introduction		
Computer communication, Communication system, Signal and Data, Transmission Modes, Synchronous and asynchronous transmission. Transmission Media: a) Guided Media – Twisted Pair, Coaxial and Fiber-optic cables, b) Unguided Media: Radio, Micro Waves and Satellite, Multichannel Data Communication: Circuits, channels, Network Topologies, LAN, MAN, WAN, Multiplexing: FDM, TDM, CDM and WDM, Ethernet (Standard and Fast): frame format and specifications		9
UNIT II Data Link Layer		
Connection oriented N/Ws vs Connectionless N/Ws, Peer to peer networks, Design issues of Datalink layer. Framing: Fixed size framing, Variable size framing, Function of Datalink layer:	CLO	9

Flow Control, Error Control, Error detection and correction, CRC, Simplex stop and wait, CSMA/CD, CSMA/CA, Sliding window protocol, Elementary data link protocols, HDLC, PPP	2	
UNIT III The OSI Reference Model		
Need of network models, Concept of layering in networking, ISO/OSI Reference model, The TCP/IP model, Comparison of OSI and TCP/IP models, Network protocols, Real world applications	CLO3	9
UNIT IV IP Addressing and Routing		
Concept of IP Addressing, IP addresses – Network part and Host Part, Network Masks, Network addresses and Broadcast addresses, Address Classes, Loop back address, IP routing concepts, Routing protocols: RIP, OSPF, BGP, Routing Tables, Stream & Packets, Sliding Windows, Role and Features of IP, TCP Connections types and working. IPV6: The next generation Protocol, IPv4 Vs IPv6.	CLO4	9
UNIT V Application Layer		
Domain Name System (DNS) and DNS servers, DHCP, Electronic Mail: Architecture and services, Message Formats, MIME, message transfer, SMTP, Mail Gateways, Relays, Configuring Mail Servers, File Transfer Protocol, World Wide Web: Introduction, Architectural overview, static and dynamic web pages, WWW pages and Browsing, HTTP, HTTPS	CLO5	9
Total Hours		45

				4.	Analyze the cyber-		privacy issues	
				_	and preventive me			
				5.	Analyze the variou	is attacks in the web	interface.	

Course Contents and Syllabus:

Descriptors/Topics	CLO	Hours
UNIT I		
Introduction to Cyber security: Overview of Web-technology, Communication and web	CLO1	6
technology, Internet and World wide web, Advent of internet, Internet infrastructure for Data		
transfer and Governance, Regulation of Cyberspace, Concept of Cyber Security, Issues, and		
challenges of Cyber Security.		
UNIT II		
Networking: Networking Basics-Components, Topology-Bus, Star, Ring, Tree, Types of	CLO2	6
Networks-LAN, MAN, WAN, GAN, Networking Protocols-HTTP, HTTPS, DNS, TCP/IP,		
Security of Protocols, Sample application hosted on-premises.		
UNIT III		

Digital Security: Basics of Digital Security, Protecting personal computers and devices, Protecting devices from Virus and Malware, Authentication and Authorization, Need for strong and secure credentials, Protecting servers using physical and logical security, Security of browser to web server interaction.	CLO3	6
UNIT IV		
Cyber Attacks: Introduction, Application security (design, development, and testing), Operations Security, Monitoring, Identifying threats and remediating them, Principles of data Security, Confidentiality, Integrity and Availability, Data Privacy, Data breaches, Preventing attacks and breaches with security controls, Compliance standards, Computer Ethics.	CLO4	6
UNIT V		
Cybercrime and Cyber law: Classification of cybercrimes, Cybercrime targeting computers and mobiles, Cybercrime against women and children, Financial frauds, Social engineering attacks, malware and ransomware attacks, zero day and zero click attacks, Cybercriminals modus operandi, Reporting of cybercrimes, Remedial and mitigation measures, IT Act 2000 and its amendments, Cybercrime and offenses, Organizations dealing with Cybercrime and Cyber security in India, Case studies.	CLO5	6
Total hours		30

					nalyze, design and implimulate and implement			
					ogic circuits.	combinational and St	quentiai	

Course Contents/Syllabus:

Descriptors/Topics	CLO	Hours
UNIT I		
Number System and Codes: Decimal, Binary, Hexadecimal,Octal,Codes,BCD, Gray and Excess 3 codes, code conversions,Complements (1's, 2's,9's and 10's),Addition - Subtraction using complement methods.	CLO1	6
UNIT II		
Boolean Algebra and Theorems: Boolean Theorems,De-Morgan's laws,Digital logic gates,Multi-level NAND & NOR gates,Standard representation of logic functions (SOP and POS),Minimization Techniques(Karnaugh Map Method)	CLO2	6
UNIT III		
Combinational Digital Circuits: Address Half & full adder, Subtractor Half and full subtractors, Parallel binary adder, Magnitude Comparator, Multiplexers (4:1)) and Demultiplexers (1:4)	CLO3	6
UNIT IV		
Sequential Digital Circuits: Flip Flops,SR,FF,JK,FF,T and D type,FFs,Master-Slave FFs,Excitation tables,Registers,Serial in Serial Out,Parallel In and Parallel Out, Counters Asynchronous,Mod-8,Mod-10	CLO4	6
UNIT V		
Memory Devices: General Memory Operations,ROM,RAM (Static and Dynamic), PROM, EPROM, EEPROM, EAROM.	CLO5	6
Total hours		30

CIA Guidelines

Online Quiz (Based on MCQ)- 20 marks

Activity (with short Report Submission) - 20 Marks

Academic Sincerity - 10 marks

Few of the suggested activities are Assignments, Debates, Poster presentations, Model making, Group presentation, Field visits and Group Discussions.

Debate Topics

- Ethical Approach versus Realistic Approach
- Individual and Social Approach
- Dilemma between heart and Mind

Activity

Analyze the wastage (Electricity or any other) at work place? How you managed.

Assignment

- Analyze the code of ethics at work place.
- If you fulfil the duties, rights will automatically fall in place. Justify the statement

Course Contents and Syllabus:

Descriptors and Topics	CLO	Hours
UNIT I: Introduction to Programming and Basics of C		
Introduction to problem solving using computers, Problem solving steps, Algorithms-definition, characteristics, examples, advantages and limitations, Flowcharts - definition, notations, examples, advantages and limitations, Comparison with algorithms, History of 'C' language, Features of 'C', Limitations of 'C', Structure of a 'C' program, 'C' Program development life cycle, Function as building blocks, 'C' tokens, Character set, Keywords, Identifiers	CLO 1	9
UNIT II: Control Statements in C		
Variables, Constants (character, integer, float, string, escape sequences, enumeration constant), Data Types (Built-in and user defined data types), Operators, Expressions, types of operators, Operator precedence and Order of evaluation, Character input and output, String input and output, Formatted input and output, Decision making structures:-if,if-else, switch and conditional operator, Loop control structures:-while,do while, for, Use of break and continue, Nested structures, Unconditional branching (goto statement), Role of Preprocessor, Format of preprocessor directive, File inclusion directives (#include), Macro substitution directive, argumented and nested macro, Macros versus functions	CLO 2	9
UNIT III: Functions and Array in C		
Concept of function, Advantages of Modular design, Standard library functions, User defined functions:- declaration, definition, function call, parameter passing (by value, by reference), return statement, Recursive functions, Scope of variables and Storage classes, Concept of array, Types of Arrays — One, Two and Multidimensional array, Array Operations - declaration, initialization, accessing array elements, Memory representation of two-dimensional array (row major and column major), Passing arrays to function.	CLO3	9
UNIT IV: Pointers and Structure		
Introduction to Pointers. Declaration, definition, initialization, dereferencing, Pointer arithmetic, Relationship between Arrays & Pointers- Pointer to array, Array of pointers, Multiple indirection (pointer to pointer), Functions and pointers- Passing pointer to function, returning pointer from function, Function pointer, Dynamic memory management- Allocation(malloc(),calloc()), Resizing(realloc()), Releasing(free()), Memory leak, dangling pointers. Types of pointers, Concept of structure, definition and initialization, use of typedef, Accessing structure members, Nested Structures, Arrays of Structures, Structures and functions- Passing each member of structure as a separate argument, Passing structure by value / address, Pointers and structures.	CLO4	9
UNIT V: String and File Handling		
String Literals, string variables, declaration, definition, initialization, Syntax and use of predefined string functions, Array of strings, Strings and Pointers Command line arguments, Introduction to streams, Types of files, Operations on text files, Standard library input/output functions, Random access to files.	CLO5	9

Course Contents/Syllabus:

Practical Plan

Activity Numbe r	Assignment/Practic al/Activity Title	Week Number/ Turn	Details	CLO	Hours
1	Introduction to Programming and Basics of C	Week 1 / Turn 1 and 2	Problem 1: Write a C program to display "Welcome to C Programming" on the screen. Problem 2: Write a C program to display your name, roll number, and course details.	CLO 1	4
2	Introduction to Programming and Basics of C	Week 2/ Turn 1 and 2	Problem 1: Write a program to demonstrate the use of arithmetic, relational, and logical operators. Problem 2: Convert temperature from Fahrenheit to Celsius and vice versa using mathematical expressions. Problem 3: Write a C program that contains syntax errors and debug it using an IDE.	CLO 1	4
3	Introduction to Programming and Basics of C	Week 3/ Turn 1 and 2	Problem 1: Draw a flowchart and write an algorithm to find the largest of three numbers. Then, implement the program in C. Problem 2: Draw a flowchart and write a C program to calculate the area and circumference of a circle.	CLO 1	4
4	Control Statements in C	Week 4/Turn 1 and 2	Problem 1: Write a program to check whether a given number is even or odd using an if-else statement. Problem 2: Develop a program that determines if a person is eligible to vote based on their age.	CLO 2	4
5	Control Statements in C	Week 5/ Turn 1 and 2	Problem 1: Write a C program to implement a simple calculator using switch case. Problem 2: Write a C program to print the factorial of a number using a for loop. Problem 3: Develop a program that takes a student's marks as input and assigns grades using the conditional operator.	CLO 2	4
6	Control Statements in C	Week 6/	Problem 1: Write a program to print the multiplication table of a given number using a for loop.	CLO 2	4

V) 12 10	-				
		Turn 1 and 2	Problem 2: Implement a program that calculates the sum of the first N natural numbers using a while loop.		
			Problem 3: Write a C program to check whether a number is prime using while or do-while loop.		
7	Functions and Array in C	Week 7/	Problem 1: Write a C program to calculate the sum of digits of a number using a function.	CLO 3	
		Turn 1 and 2	Problem 2: Write a C program to calculate the GCD of two numbers using recursion.	3	4
8	Functions and Array in C	Week 8/Turn 1 and 2	Problem 1: Write a C program to find the average of elements in an array. Problem 2: Write a program to perform a linear search in an array.	CLO 3	4
9	Functions and Array in C	Week 9/ Turn 1 and 2	Problem 1: Write a C program to perform matrix addition/subtraction. Problem 2: Write a C program to pass an array to a function and find the largest element.	CLO 3	4
10	Pointers and Structure	Week 10/ Turn 1 and 2	Problem 1: Write a C program to demonstrate pointer arithmetic operations. Problem 2: Write a C program to swap two numbers using call by reference.	CLO 4	4
11	Pointers and Structure	Week 11/ Turn 1 and 2	Problem 1: Write a C program using structures to store and display student information (name, roll no, marks). Problem 2: Write a C program to demonstrate an array of structures.	CLO 4	4
12	Pointers and Structure	Week 12/ Turn 1 and 2	Problem 1: Write a C program using pointers and structures to calculate the total and average marks of students. Problem 2: Write a program using an array of structures to store and display data of 5	CLO 4	4
13	String and File Handling	Week 13/ Turn 1 and 2	employees. Problem 1: Write a C program to implement predefined string functions like strlen(), strcpy(), strcmp(), strcat().	CLO 5	4
			Problem 2: Write a C program to read and write a string using pointers.

5. To Analyze and manage processes and signals in UNIX, including creating and controlling processes, handling system signals, and ensuring efficient system resource utilization.

Course Contents and Syllabus:

Descriptors and Topics	CLO	Hours
UNIT I		
INTRODUCTION OF UNIX: Brief history, Unix Components/Architecture. Features of Unix. The UNIX Environment and UNIX Structure, Posix and Single Unix specification. The login prompt. General features of Unix commands/command structure. Command arguments and options. Understanding of some basic commands such as echo, printf, ls,date, passwd, cat, cal, date, calendar.	CLO1	9
UNIT II		
UNIX FILE SYSTEM: Basic file types/categories, Organization of files. Hidden files. Standard directories. Parent child relationship, The home directory and the HOME variable, Reaching required files- the PATH variable, Relative and absolute pathnames, Directory commands – pwd, cd, mkdir, rmdir commands, The dot (.) and double dots () notations to represent present and parent directories and their usage in relative path names. File related commands –mv, rm, cp, wc and od commands.	CLO 2	9
UNIT III		
INTRODUCTION TO THE SHELL SCRIPTING: Introduction to Shell Scripting, Shell Scripts, read, Command Line Arguments, Exit Status of a Command, The Logical Operators && and , exit, if, and case conditions, expr, sleep and wait, while, until, for, \$, @, redirection.	CLO3	9
UNIT IV		
SHELL PROGRAMMING: Ordinary and environment variables, Command line arguments. exit and exit status of a command. Logical operators for conditional execution, The if, while, for and case control statements, The set and shift commands and handling positional parameters. Simple shell program examples. File inodes and the inode structure.	CLO4	9
UNIT V	GT 0.5	
PROCESS AND SIGNALS: Introduction, Process, process identifiers, process structure, process table, viewing processes, system processes, process scheduling, starting new processes, waiting for a process, zombie processes, orphan process, fork, vfork, exit, wait, waitpid, unreliable signals, interrupted system calls, kill, raise, alarm, pause, a bort, system, sleep functions, signal sets.	CLO5	9

			 Understand the fundamental principles and goals of cryptography. Explore classical and modern cryptographic algorithms. Analyze cryptographic techniques used for confidential integrity, and authentication. Evaluate cryptographic attacks and countermeasures. Study real-world applications of cryptography in secure systems. 				
Course Learning Outcomes (CLO):			Students will be able to: 1. Explain the core concepts of cryptography and its role in security. 2. Compare different encryption and decryption techniques. 3. Apply cryptographic methods to ensure confidentiality, integrity, and authentication. 4. Analyze cryptographic vulnerabilities and attack vectors. 5. Evaluate cryptographic protocols used in real-world applications.				

Course Contents and Syllabus:

Descriptors and Topics	CLO	Hours
UNIT I: Introduction to Cryptography		
Basics of Cryptography: Definition, Goals, and Principles, Evolution of Cryptography: From	CLO 1	6
Classical to Modern Techniques, Types of Cryptographic Systems: Symmetric vs. Asymmetric		
Cryptography, Key Concepts: Confidentiality, Integrity, Authentication, and Non-Repudiation,		
Applications of Cryptography in Secure Communication		
UNIT II: Classical Cryptography and Number Theory		
Classical Encryption Techniques: Caesar Cipher, Vigenère Cipher, Playfair Cipher,	CLO 2	6
Cryptanalysis of Classical Ciphers, Introduction to Number Theory: Modular Arithmetic,		
Prime Numbers, Euler's Theorem, Greatest Common Divisor (GCD), Extended Euclidean		
Algorithm, Fermat's Theorem and Chinese Remainder Theorem (CRT)		
UNIT III: Modern Symmetric Cryptography		
Block Ciphers vs. Stream Ciphers, Data Encryption Standard (DES) and Triple DES (3DES),	CLO3	6
Advanced Encryption Standard (AES) and Key Expansion, Modes of Operation: ECB, CBC,		

CFB, OFB, CTR, Cryptanalysis Techniques: Brute Force, Differential and Linear		
Cryptanalysis		
UNIT IV: Public-Key Cryptography and Digital Signatures		
Concept of Public and Private Keys, RSA Algorithm: Key Generation, Encryption, and	CLO4	6
Decryption, Diffie-Hellman Key Exchange, Elliptic Curve Cryptography (ECC), Digital		
Signatures and Hash Functions (SHA-256, MD5)		
UNIT V: Cryptographic Protocols and Real-World Applications		
Message Authentication Codes (MACs) and HMAC, Digital Certificates and Public Key	CLO5	6
Infrastructure (PKI), Transport Layer Security (TLS) and Secure Sockets Layer (SSL),		
Blockchain and Cryptocurrency Cryptography, Case Studies: Cryptography in Secure Email,		
VPNs, and E-Banking		
Total Hours		30

CIA Guidelines

Online Quiz (Based on MCQ)- 20 marks

Activity (with short Report Submission) - 20 Marks

Academic Sincerity - 10 marks

Few of the suggested activities are Assignments, Debates, Poster presentations, Model making, Group presentation, Field visits and Group Discussions.

Few of suggested topics related to UHV1- Professional Ethics are:

Debate Topics

- Ethical Approach versus Realistic Approach
- Individual and Social Approach
- Dilemma between heart and Mind

Activity

Analyze the wastage (Electricity or any other) at work place? How you managed.

Assignment

- Analyze the code of ethics at work place
- If you fulfil the duties, rights will automatically fall in place. Justify the statement
